# 🧩 CloneCut — Smart Video Resizing & Naming Tool

**CloneCut** is a lightweight yet powerful local tool designed for short video creators, media teams, and video studios. Simply import a 9:16 video to generate multiple size variants in one click, and batch-export them using a modular naming system.

🖥️ Platform: Windows 10 / 11
🚫 No internet required / No installation
🧠 Smart modular naming blocks
🎞️ One-click multi-size video generation
🧾 Supports ZIP export with auto naming

---

# 🚀 How to Use

1. Extract the folder and double-click `CloneCut.exe` (or your custom filename)

2. Wait a moment — your browser will open the CloneCut interface automatically

3. Upload a video, select output sizes, and add naming blocks

4. Set a ZIP file name and click "Start and Download"

---

# 📂 Supported Output Formats

- Supported sizes:

    - 9:16 (Vertical)

    - 1:1 (Square)

    - 16:9, 2:3, 4:5 (Popular formats)

- Output format: `.mp4`

- Output packaging: `.zip`

---

## 🔐 Data Security

- CloneCut is a fully offline local tool

- No network access, no uploads, no data storage

- Safe for commercial use, content creation, and internal collaboration
