
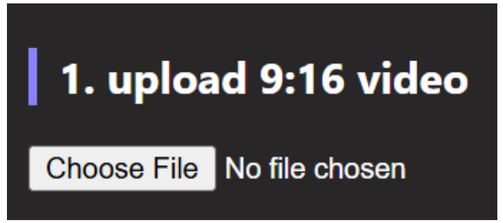
CloneCut 1.0.5

Smart Multi-Size Video Export & Naming Tool

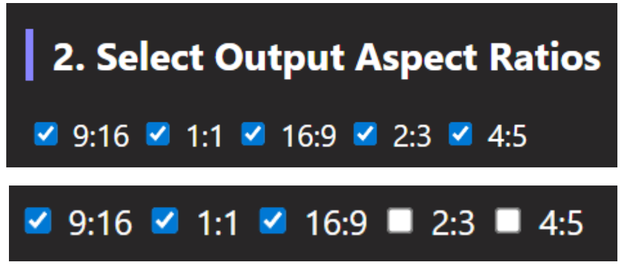
User Guide

CloneCut1.0.5 User Guide

1.Upload 9:16 Video

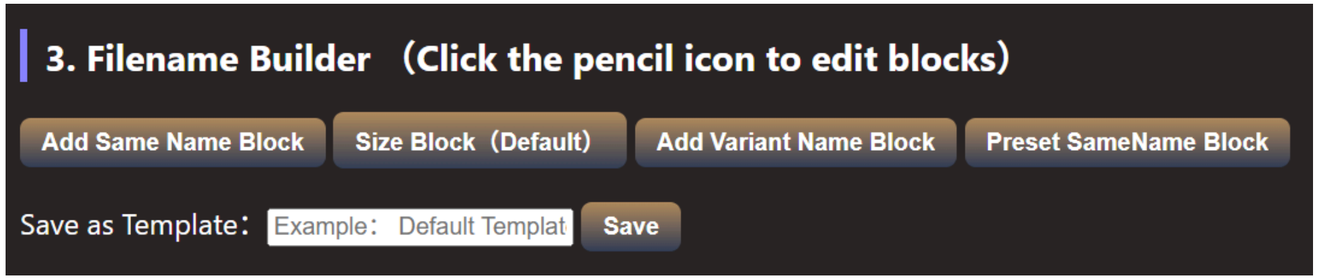


2.Select Output Aspect Ratios



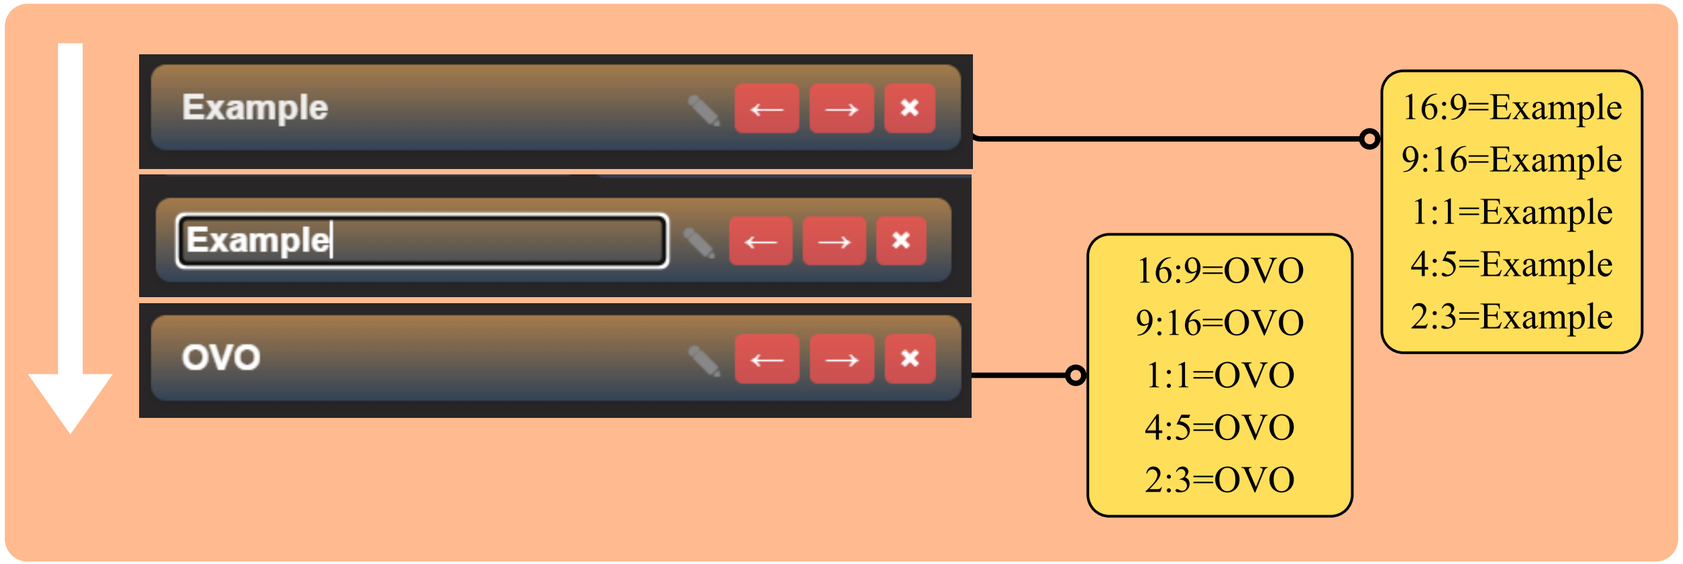
3.File name Builder

General guide: Click a brick to add naming content. The left and right arrows change the position of this brick in the naming queue. The cross button deletes the brick. The edit button changes the brick name.



3.1 “Add Same Name Block：

After clicking, the brick appears with the default name Example. Click the pencil icon to edit it. Click the pencil icon again to exit edit mode and save.



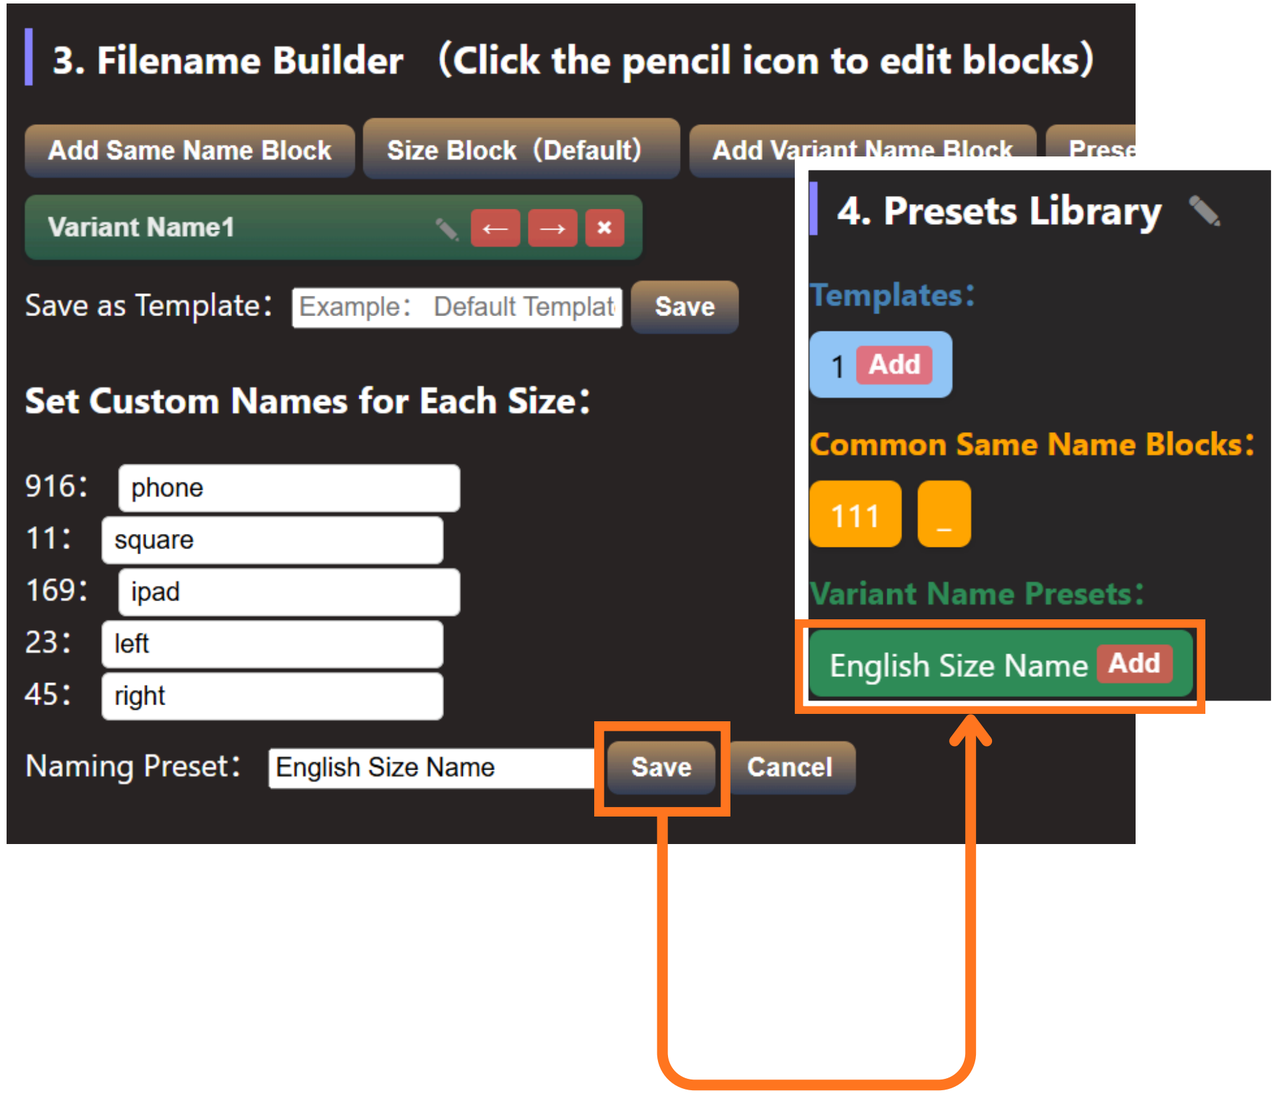
3.2 “Size Block (Default)”：

“9:16” becomes “916”. “1:1” becomes “11”. Other sizes follow the same rule.

16:9=169
9:16=916
1:1=11
4:5=45
2:3=23

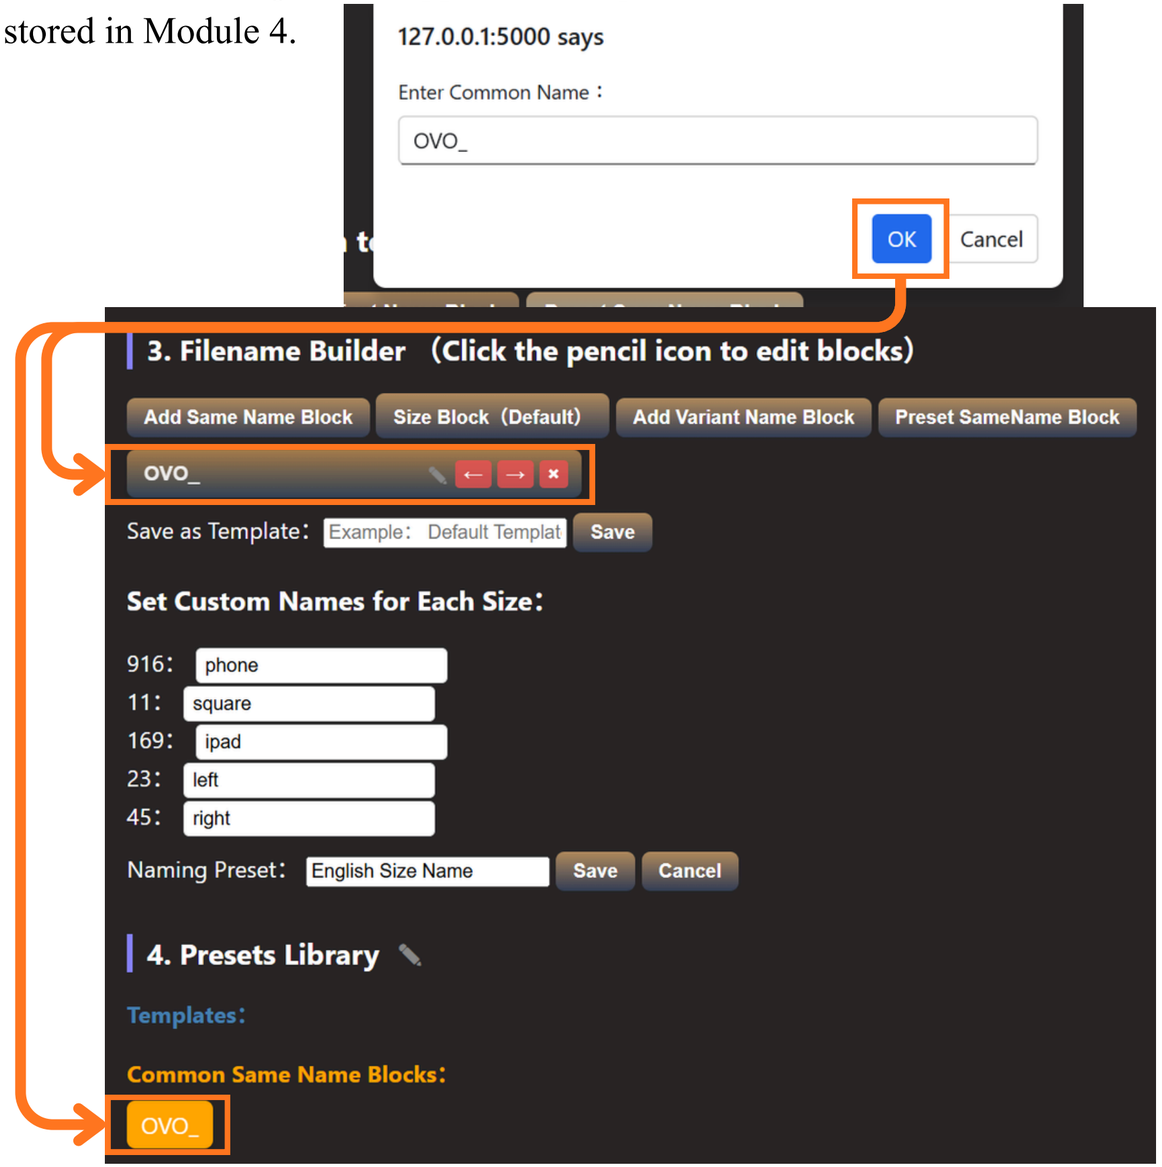
3.3 “Add Variant Name Block”: Add Variant Name Block

After clicking, the custom name panel will appear. You can enter different names for videos of different sizes. After saving the naming preset, it will appear in “4. Custom”.



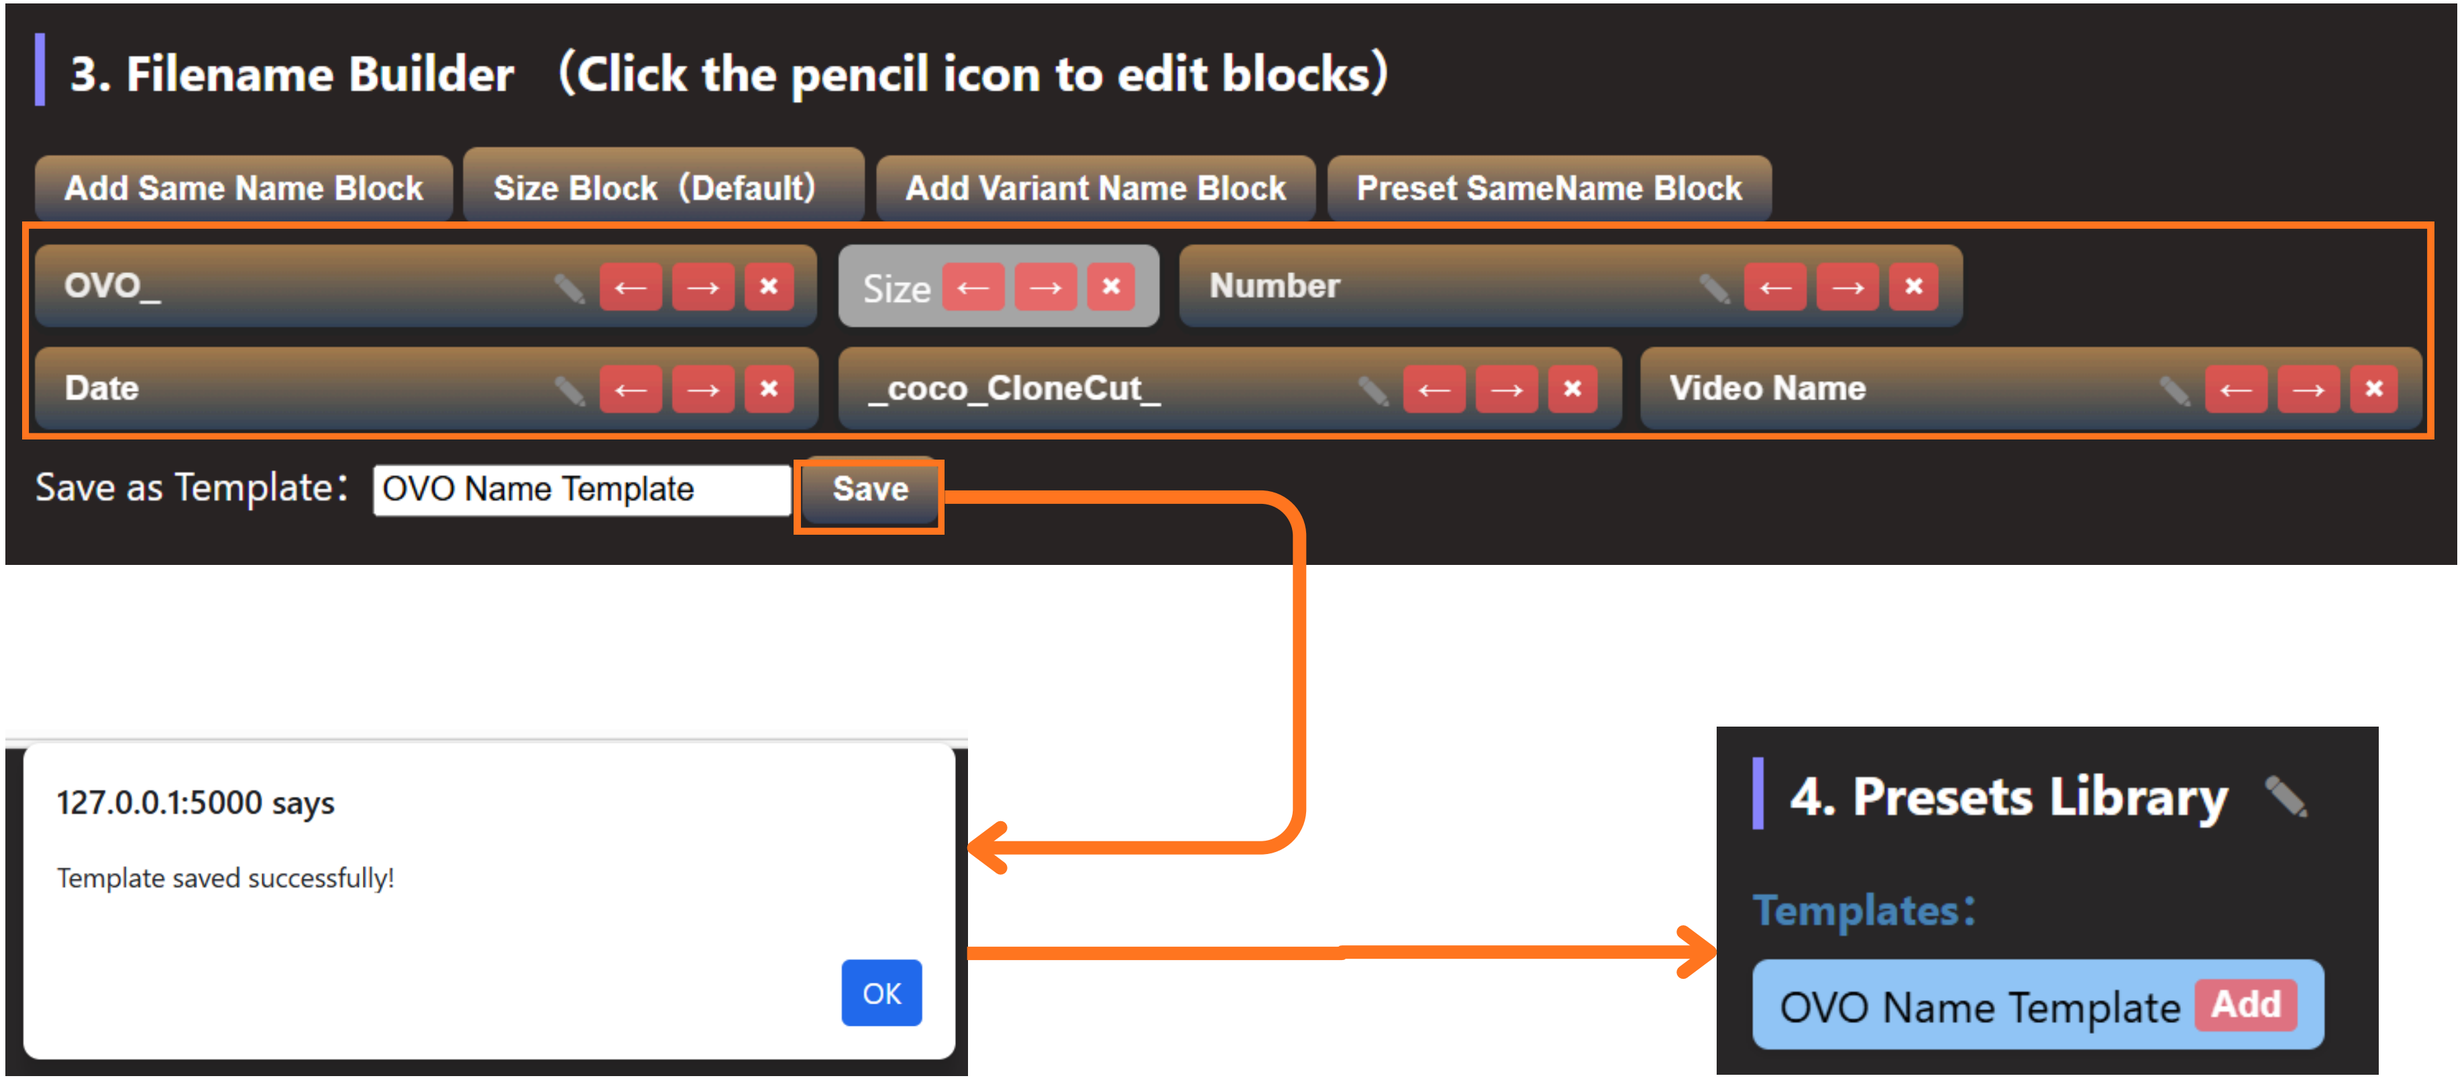
3.4 “Preset SameName Block”: Preset SameName Block

After clicking, a small browser popup will appear to enter the common name. After saving, it will appear in the queue of Module 3 and will also be stored in Module 4.



3.5 “Save as Template”：

Set the template name and click save. The current brick queue will be saved as a template.

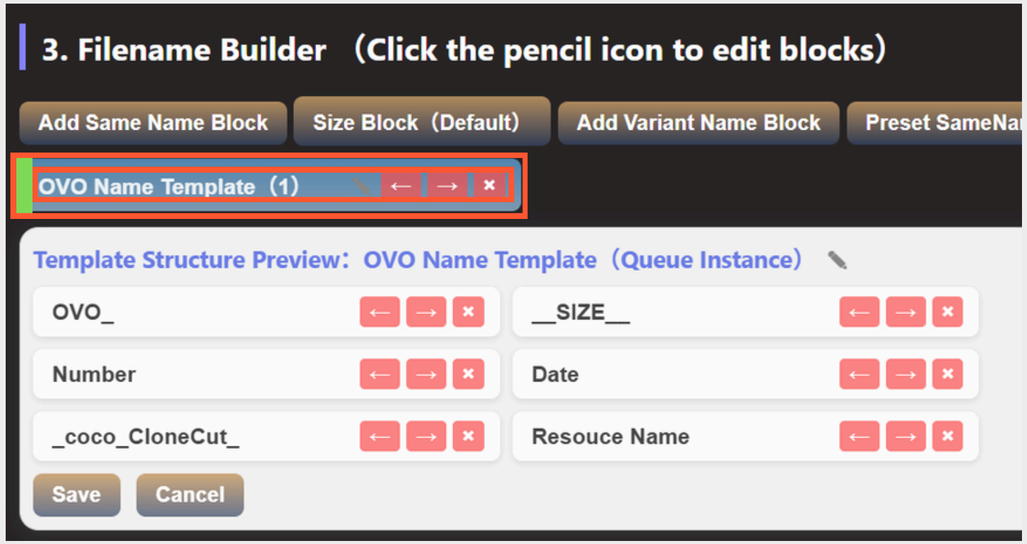


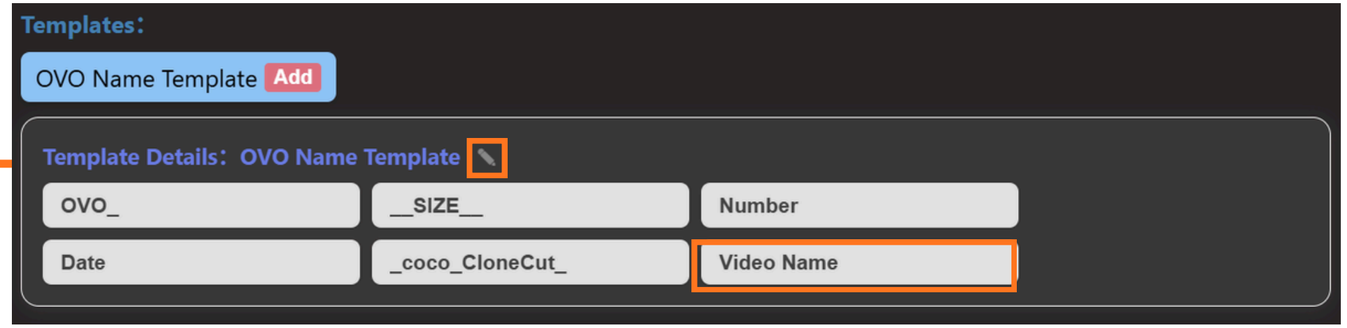
4.Presets Library

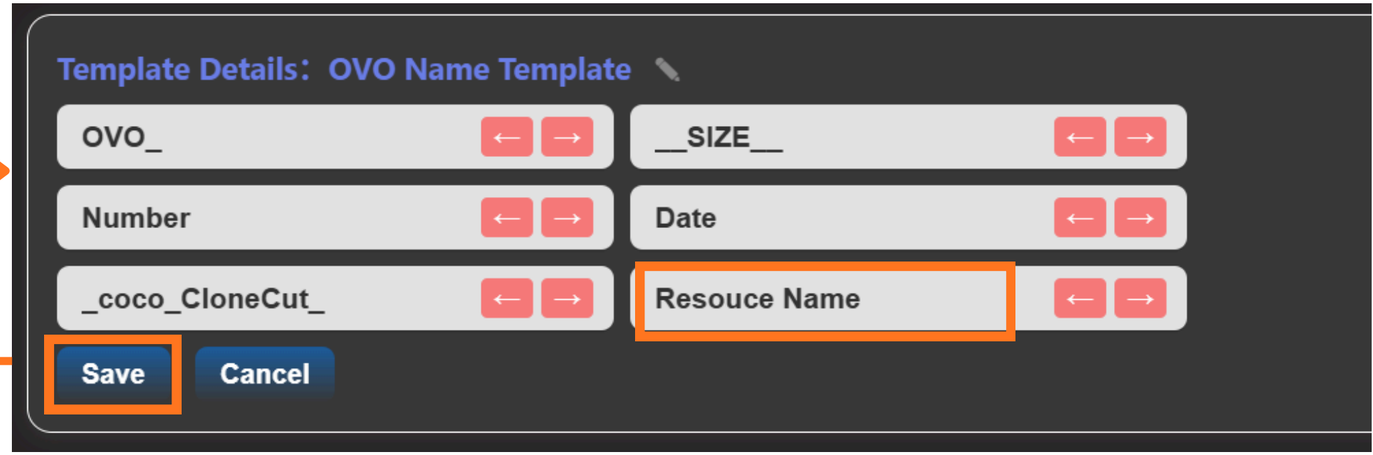
4.1 “Templates”. Click the blue brick to open the template details. Click the pink add button to add the template to the naming queue in Module 3.

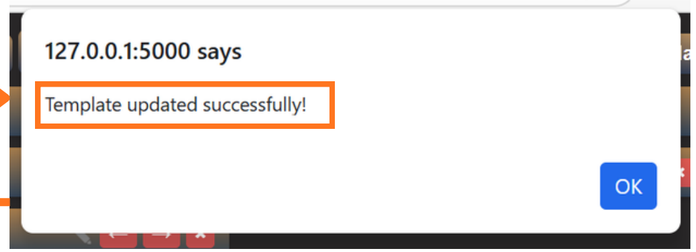
Click the edit button at the end of a row in the template details to make limited changes to the bricks in the template. For custom name bricks you can only change the custom name title. You cannot change the specific size settings.

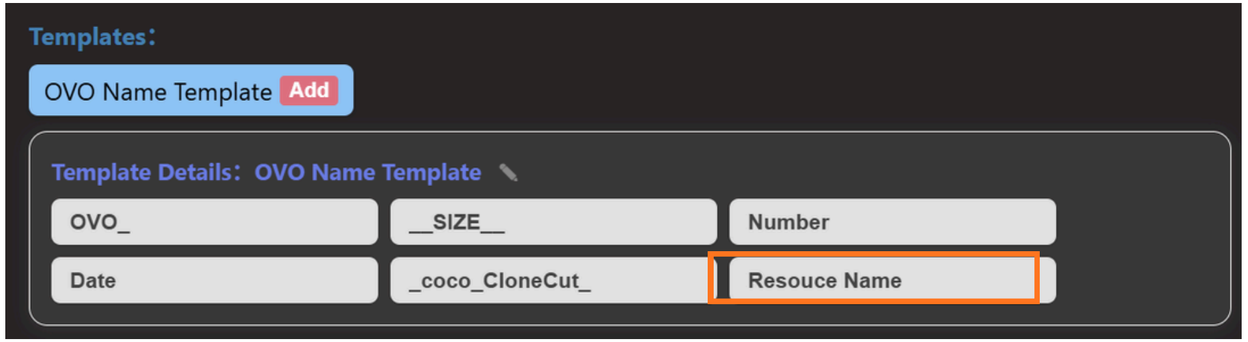
Click add to Module 3. Click the marked green area or the non button area between the two red boxes to open the template preview and edit it.



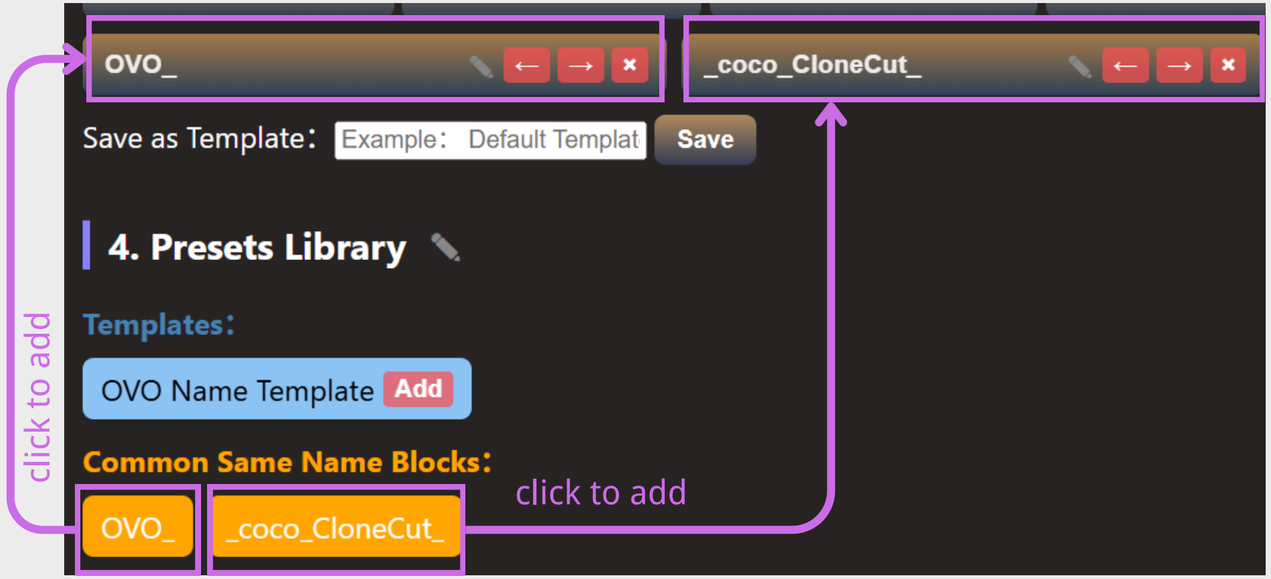




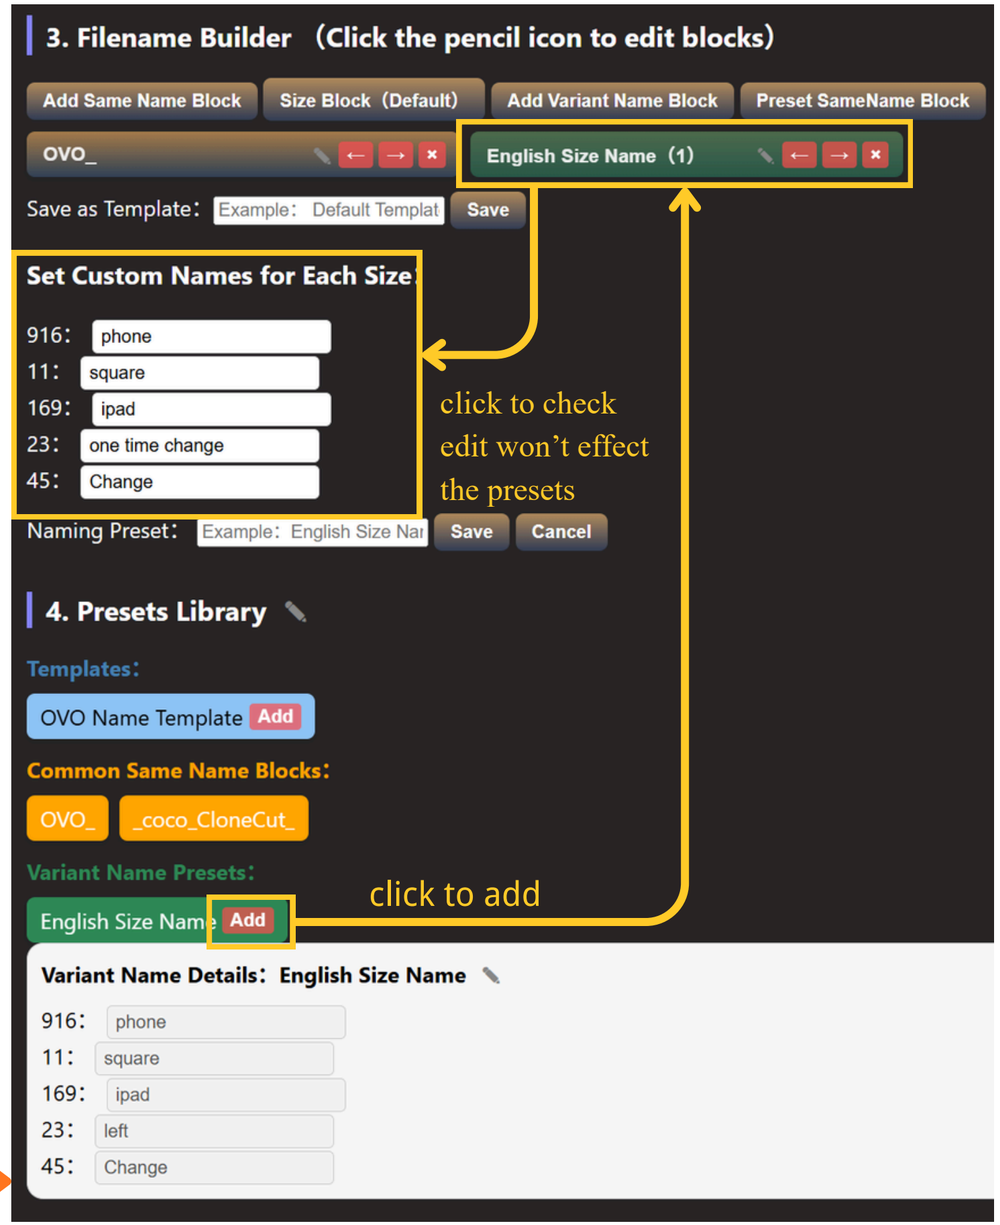


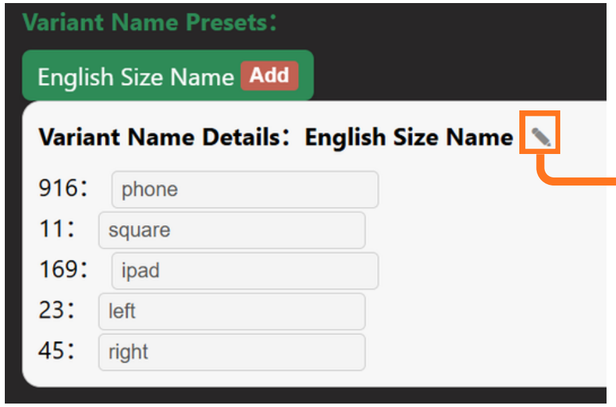


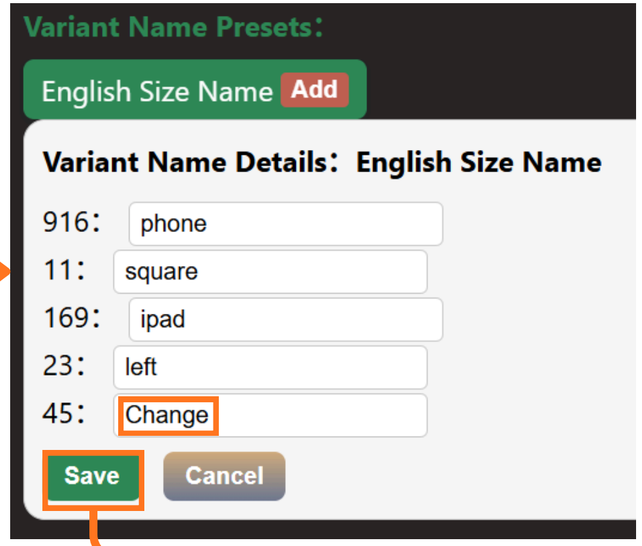
4.2 Common same name. Bricks that were saved in advance through Module 3 Add common same name brick will appear here. Click to add.



4.3 Custom name presets. Bricks that were saved in advance through Module 3 Add custom name brick will appear here. Click to add. You can also open the panel preview to edit. You can also edit it in Module 3.







5.Set Export ZIP Filename

Set the zip file name and export. The waiting time depends on the video length and the device. Usually a 15 second video for all sizes takes about one minute.
